ROKO GAMES

Game Design & Production Document 2026

Reimagining Gaming for Smartwatches
Lean. Platform-Native. Defensible.

EXECUTIVE SUMMARY

Company: Roko Games Private Limited
Founded: January 2026
Location: Visakhapatnam, Andhra Pradesh, India
UDYAM Registration: UDYAM-AP-10-0124235 (Micro Enterprise)

Vision

Roko Games is building the wearable gaming infrastructure layer - a reusable sensor engine that enables rapid development of platform-native smartwatch games at a fraction of traditional costs. We are democratizing wearable game development through our modular GAMMA Core platform.

Market Opportunity

Smartwatch Market: $108B (2025) → $176B (2029)
Wear OS Growth: 25.4% CAGR through 2030
Wearable Gaming: $486M (2025) market, 6.8% CAGR
Gap: Most games are poor mobile ports or $1M+ exclusives. Platform-native games at lean costs don't exist.

Current Status

Flagship Product: RetroTennis (Wear OS) – Production Ready
Recognition: Selected for Indie40 at IGDC 2025
Traction: Beta testing completed
Pipeline: Road Rash, Pinball, Dynamic Wallpaper Companion in roadmap
Team: 2 founders with Android/Wear OS expertise and corporate operations experience

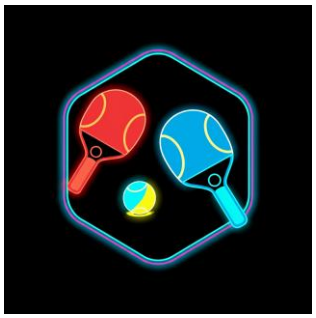
OUR PORTFOLIO FOR 2026

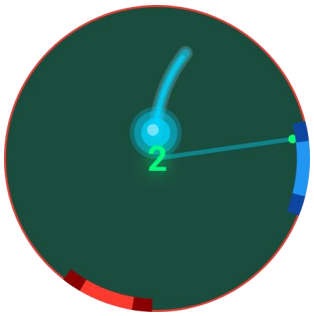
Indian gamers and global smartwatch users want a wearable-first experience which leverages the unique capabilities of the platform—gyroscope, accelerometer, and haptic feedback—rather than poor touch adaptations of mobile games. Our GAMMA Core engine enables rapid, cost-effective development of platform-native experiences.

Published Games

RetroTennis (Status: Production Ready)

Genre & Platform: Gravity-Controlled Sports | Wear OS
Description: Classic Pong reimagined with wrist-controlled gameplay, optimized for round smartwatch displays
Target Audience: Smartwatch gamers (25-45 years), casual sports fans, retro gaming enthusiasts
Status: v1.9.1 production ready, preparing for public launch March 2026





In Production

Road Rash (Target: April 2026)

Genre & Platform: Gyro Racing | Wear OS
Description: Retro-style motorcycle racing with tilt-to-steer mechanics and combat elements
Status: Early development using GAMMA Core engine

Pinball-BlindMaze (Target: April 2026)

Genre & Platform: Physics Arcade | Hyper casual

Description: A pinball/ Maze runner game reimagined with gyro nudge mechanics and haptic flipper feedback with an idea of exploring non-visual haptic-only gaming
Status: Prototyping phase

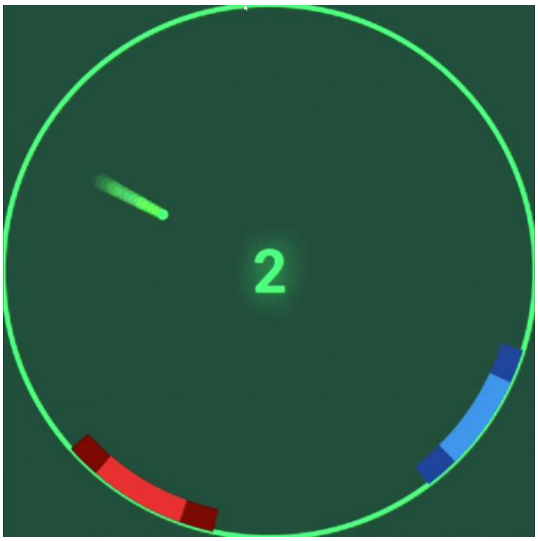
In Research Phase

Dynamic Wallpaper Companion

Type: Wellness & Utility
Description: Context-aware animated companion with haptic mini-games for ADHD/anxiety support
Status: Concept development

GAME 1: RETROTENNIS

Genre & Platform: Gravity-Controlled Sports | Wear OS
Status: Production Ready (v1.9.1)
Recognition: Indie40 Finalist at IGDC 2025
Description: RetroTennis brings the nostalgia of Pong to Wear OS, creating an innovative wrist-controlled gaming experience. Built on our modular GAMMA Core engine, the game uses gravity-based sensor controls optimized specifically for smartwatch form factors.



Target Audience:

- Smartwatch early adopters (25-45 years)
- Casual gamers seeking short, engaging sessions
- Retro gaming enthusiasts and nostalgia seekers
- Commuters and fitness enthusiasts with smartwatches
- Users seeking zero-touch, hands-free gameplay

Monetization:

- Free-to-play with Game Credits (GC) system - daily grants for sustained engagement
- Premium unlock: ₹199 (unlimited play, ad-free experience)
- Future: Companion app with ad-viewing for token rewards, cosmetic customizations

Game Link: Available on Google Play Store (Wear OS)

RETROTENNIS: CORE GAMEPLAY

Game Modes Overview

RetroTennis features four distinct single-player modes plus cooperative multiplayer, each leveraging different sensor control schemes:

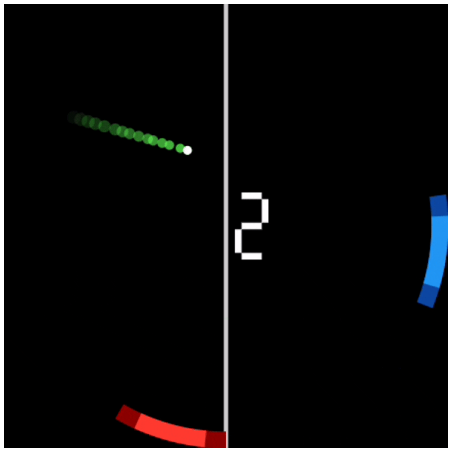
Arcade Mode

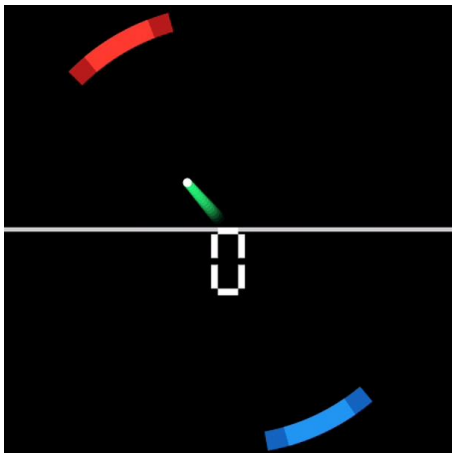
Classic vertical net orientation with horizontal bat movement controlled by wrist rotation (pronation/supination). Features adaptive AI that scales difficulty based on player performance, time played, and rally patterns. Ideal for quick pick-up-and-play sessions.

- Key Features:
    - Wrist tilt controls (X-axis rotation)
    - Adaptive AI with multiple strategic behaviors
    - Real Mode option for instant game-over challenge
    - 30fps physics for responsive gameplay

Power Mode

Horizontal net orientation with vertical bat control via wrist up/down movement (Y-axis rotation). Same adaptive AI system rotated 90 degrees for a different control challenge.



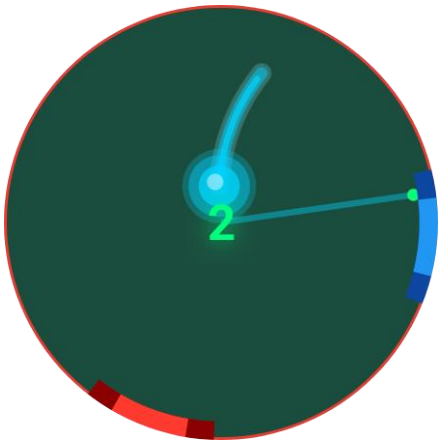


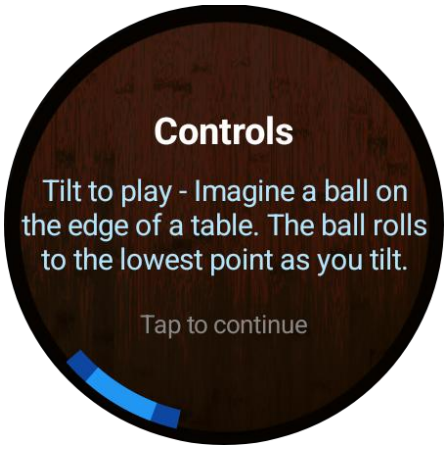
Retro Mode

Bird's-eye 360° tabletop perspective providing full circular court navigation. Combines X and Y wrist rotation for complete perimeter control. Features advanced quaternion-based calibration with dynamic neutral tracking and drift protection.

Retro Pro Mode

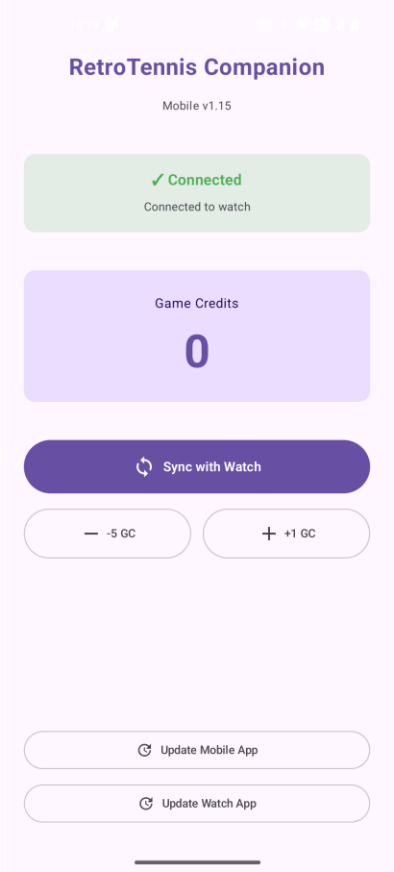
Advanced variant of Retro Mode with score-based progression and trajectory control mechanics. After reaching milestone scores, players unlock "Controlled Rebound" - the ability to adjust ball trajectory during brief pause windows using visual prediction paths and crown/touch controls.





Co-Op Mode (In Development)

Two-player cooperative gameplay via mobile companion app. Mobile device runs game physics while smartwatch acts as remote controller. Features bidirectional synchronization at 30fps for responsive multiplayer experience.



MULTIPLAYER CO-OP MODE

The Co-Op mode introduces a unique **Local Asymmetric Multiplayer** experience, transforming the solitary smartwatch game into a shared social activity. By pairing the Wear OS device with a companion Android phone, two players can compete on a single digital court in real-time.

1. Architecture & Roles

The system utilizes a **Host-Client architecture** designed to offload heavy physics calculations from the wearable to the mobile device while maintaining a responsive 30fps experience on both screens.

- **Mobile Device (Host):**
    - Acts as the authoritative game server running the BatBallPhysics engine.
    - **Player 1 (Red Bat):** Controls the top paddle using the phone's gyroscope/touch inputs.
    - **Responsibilities:** Calculates physics, ball trajectory, scoring, and broadcasts game state to the watch.

- **Wear OS Watch (Client):**
    - Acts as a remote controller and display terminal.
    - **Player 2 (Blue Bat):** Controls the bottom paddle using the signature wrist-tilt mechanics.
    - **Responsibilities:** Captures wrist rotation, renders the received game state locally, and sends user input back to the host.

3. Gameplay Experience

This mode fosters in-person social play ("Couch Co-Op").

- **Shared Screen Reality:** Both devices show the exact same match state instantly.
- **Dual Control Schemes:** The phone player uses a "Neural Finder" control interface (circular viewport mimicking the watch screen), while the watch player uses the standard gravity controls.
- **Seamless Pairing:** Automatic device discovery via the Wearable API eliminates complex IP/Bluetooth setup menus.

4. Development Status

- **Infrastructure (100%):** Networking layer, data bridging, and protocol definitions are complete.
- **Bat Synchronization (100%):** Real-time bidirectional paddle movement is fully functional.
- **Game Logic (~30%):** Physics integration and scoring rules are currently being wired up for the final release.

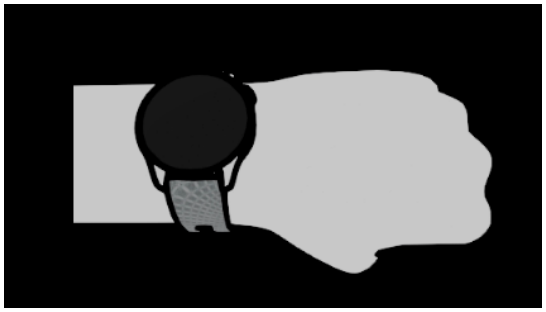
Controls & Mechanics

Sensor-Based Control System

RetroTennis employs advanced sensor fusion combining rotation vectors, accelerometer, and gyroscope data for precise, responsive control. The system adapts to individual hand movements and device characteristics through intelligent calibration.

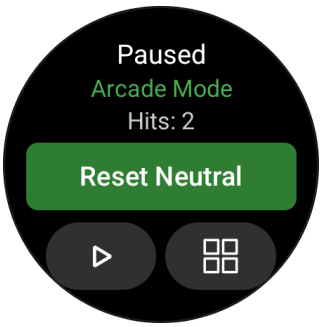
Primary Input Methods:

- Wrist Tilt (X-axis): Horizontal paddle movement in Arcade mode
- Wrist Up/Down (Y-axis): Vertical paddle movement in Power mode
- Combined Motion (X+Y): 360° navigation in Retro modes
- Crown Rotation: Trajectory adjustment in Retro Pro Mode
- Haptic Feedback: Contextual vibration based on ball speed and impact



Auto-Calibration System

Intelligent multi-phase calibration captures player's natural motion range without requiring extreme wrist movements. The system automatically adapts to device orientation and hand position, with optional quick recalibration available mid-game.



Smart Pause Technology

Automatically detects calibration drift and hand movement constraints, pausing gameplay to prevent frustration. System respects Wear OS power management with screen-off detection and fair resume mechanics.

Unique Selling Points

- Zero-Touch Gameplay: Entire experience playable without screen interaction—ideal for gloves, wet hands, or one-handed use
- Gravity-Native Design: Sensor controls aren't an add-on—they're the core mechanic, feeling natural on the wrist
- Round Display Optimized: Court layouts specifically designed for circular smartwatch screens
- Ultra-Lightweight: Minimal battery consumption with AMOLED-optimized graphics
- Instant Sessions: Sub-2-second load times, matches complete in 30-90 seconds
- Privacy-First: No data collection, no analytics, completely offline-capable

RETROTENNIS: MONETIZATION STRUCTURE

Game Credits (GC) Economy

RetroTennis uses a sustainable free-to-play model balancing accessibility with premium value. The Game Credits system provides generous daily grants while offering friction-free premium upgrade.

Free Play Path

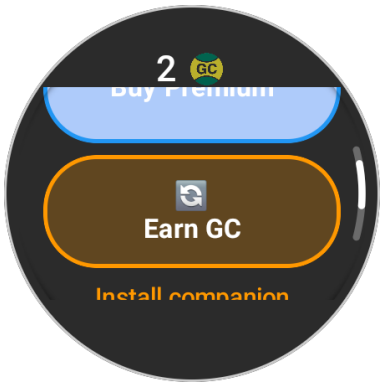
- Initial seed grant on first launch (randomized allocation)
- Daily refresh system - consistent grants per calendar day
- Match-based consumption - play until defeat
- No forced ads or interruptions during gameplay
- Transparent credit display on home screen

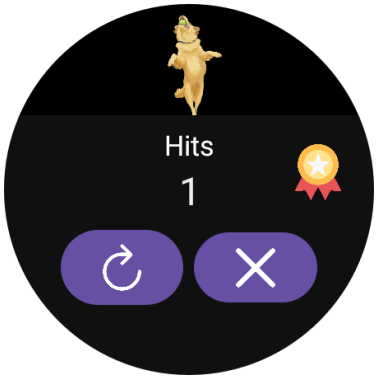
Premium Unlock

One-time purchase (₹199) removes all credit restrictions and provides unlimited play. Premium status syncs across devices via Google Play Billing and includes future exclusive features.

Token Bridge System (Planned)

Mobile companion app will enable ad viewing to earn GC tokens, creating a sustainable monetization alternative without disrupting watch gameplay. Tokens earned on mobile bridge seamlessly to watch via secure synchronization.





Revenue Projections

Conservative conversion rate modeling based on affluent Wear OS demographic (41% earning $100K+). Premium pricing positioned below typical mobile game IAPs while reflecting platform value.

RETROTENNIS: PROGRESSION & RETENTION

Difficulty Scaling

RetroTennis features intelligent adaptive AI that eliminates manual difficulty selection. The system observes player performance across multiple dimensions—reaction time, rally length, successful returns—and gradually increases challenge to maintain engagement without frustration.

AI Progression System

- Auto-scaling difficulty based on player performance and match duration
- Multiple strategic modes: Defensive, Balanced, Aggressive, and Dribble
- Trajectory prediction with intelligent positioning
- Gentle assist in advanced modes prevents unreachable shots
- Speed caps in Pro modes maintain competitive balance

Ball Speed Progression

Incremental speed increases occur naturally throughout rallies, rewarding sustained play with heightened challenge. Visual feedback includes dynamic trail rendering and color intensity changes that communicate ball velocity at a glance.

[IMAGE PLACEHOLDER: Ball speed progression visual showing trail effects at different speeds]

Visual & Haptic Feedback

Contextual Haptics

Haptic feedback intensity adapts to gameplay context—light taps for slow impacts, strong pulses for fast hits. Distinct patterns for scoring, errors, and achievements provide non-visual game state awareness.

Visual Cues

- Dynamic ball trails that lengthen with speed
- Color intensity shifts indicating velocity
- Calibration status indicators (color-coded drift warnings)
- Trajectory prediction paths in Pro Mode (green natural, blue adjusted)
- LCD-style retro score displays
- Pro Mode milestone badges and animations

Retention Mechanics

Daily Engagement

- Daily credit refresh encourages return visits
- High score tracking per game mode
- Win streak persistence across sessions
- Real Mode challenges for competitive players

Progression Tracking

Local storage of achievements, high scores, and statistics without requiring cloud connectivity. Privacy-first design ensures player data remains on-device.

RETROTENNIS: ART & AUDIO DESIGN

Visual Style

Art Direction

RetroTennis employs minimalist 2D aesthetics optimized for circular AMOLED displays. The design philosophy prioritizes clarity, outdoor visibility, and battery efficiency through strategic use of pure blacks and high-contrast elements.

Design Principles:

- AMOLED black backgrounds for battery conservation (pixels-off technology)
- High contrast ratios for sunlight readability
- Round display optimization - no wasted screen real estate
- Retro aesthetic with modern polish (LCD-style digits, clean geometry)
- Distinct color coding for player (blue) vs AI (red) bats

Mode-Specific Themes

- Arcade/Power Modes: Vertical/horizontal court layouts with classic net

- Retro Mode: 360° circular court with radar-inspired aesthetic
- Retro Pro Mode: Enhanced with trajectory visualization overlays
- Co-Op Mode: Dual-player color differentiation

Audio Design

Sound Philosophy

Minimal, non-intrusive audio design recognizing that many smartwatch users play on mute. Haptic feedback serves as primary "audio" channel with optional sound effects for ambiance.

Haptic-First Feedback

- Variable intensity pulses based on ball velocity (light/medium/heavy hits)
- Distinct patterns for menu navigation, scoring, and game events
- Crown rotation feedback with tactile clicks
- Success/error patterns for achievements and failures
- Calibration completion confirmation

Optional Sound Effects

Crisp, satisfying audio cues available for users who prefer sound-on experience. All sounds designed for brief, clear communication without background music distraction.

RETROTENNIS: TECHNICAL SPECIFICATIONS

Platform Requirements

Target Platform: Wear OS 3.0+
Minimum Requirements: 1GB RAM, round display support
Optimized For: Samsung Galaxy Watch 4/5/6, Google Pixel Watch, TicWatch Pro series
SDK Target: Android 15 (API 36) with backward compatibility to Wear OS 3

Performance Benchmarks

Metric	Target Specification
Frame Rate	Stable 30fps across all game modes
Input Latency	<100ms sensor-to-display response
App Size	<10MB installed (optimized assets)
Battery Impact	<2% drain per 10-minute session
Memory Footprint	Minimal RAM usage with efficient caching

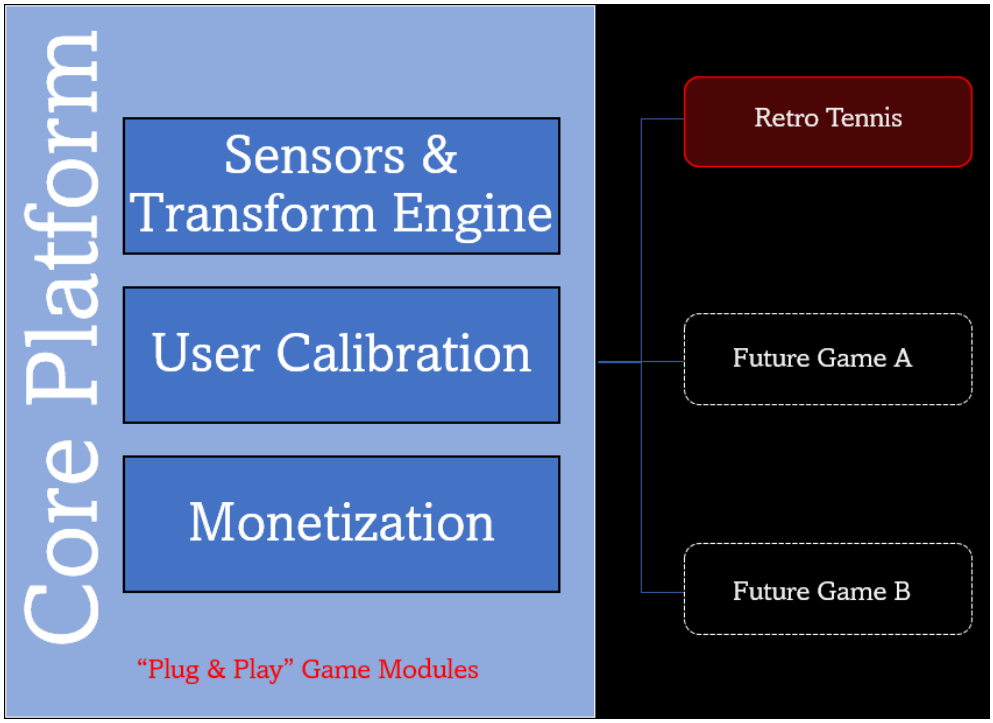
Technology Stack

Core Technologies

- Language: Kotlin - native Android/Wear OS performance
- UI Framework: Jetpack Compose - modern declarative UI optimized for Wear OS
- Build System: Gradle with multi-module architecture (wear, mobile, shared)
- Sensor Access: Android SensorManager API with custom quaternion processing
- State Management: Kotlin Coroutines and StateFlow for reactive patterns
- Monetization: Google Play Billing integration with device-local security

Custom Engine: GAMMA Core

Proprietary lightweight framework built specifically for Wear OS constraints. Modular architecture enables rapid development of multiple retro games on shared foundation. Key components include sensor transforms, calibration manager, physics engine, and rendering pipeline.



Data & Privacy

Link: roko.co.in/privacypolicy

- Zero personal data collection - completely privacy-first design
- No analytics or tracking of any kind
- Local-only storage using Android Shared Preferences
- Optional cloud save via Google Play Games (planned)
- Fully functional offline mode
- GDPR/CCPA compliant by design (no data = no compliance issues)

Networking (Co-Op Mode)

Bidirectional communication over Wearable Data Channel at 30fps for multiplayer. Features include frame deduplication, latency tracking, and graceful degradation on packet loss. All game physics run on mobile device for authoritative state management.

RETROTENNIS: DEVELOPMENT ROADMAP

Phase 1: Beta Testing & Optimization (Completed - February 2026)

Objectives Achieved:

- Collected gameplay feedback from 34 engaged beta testers
- Optimized battery consumption and frame rate stability
- Balanced AI difficulty progression across all modes
- Fixed critical bugs and edge cases
- Refined calibration system based on user testing
- Implemented AMOLED optimizations for battery efficiency

Key Metrics:

Metric	Achievement
Beta Community	34 active testers via organic Reddit outreach
Organic Reach	9.8K views in first 48 hours
Platform Recognition	Indie40 Finalist at IGDC 2025

Phase 2: Public Launch (March 2026)

Deliverables:

- Google Play Store public submission (Wear OS)
- Marketing campaign across r/WearOS, r/AndroidGaming communities
- Product Hunt launch with demo video
- Press outreach to tech media (Android Central, 9to5Google, XDA)
- Launch trailer showcasing unique wrist-control mechanics
- Companion app beta release for Co-Op mode testing

User Acquisition Target:

1,000+ installs in first week via organic and community-driven growth

Phase 3: Feature Expansion (April - June 2026)

New Features:

- Co-Op Mode completion - full multiplayer with mobile companion
- Token bridge system - ad-viewing for GC rewards on mobile app

- Additional game modes and challenges
- Achievement system with local tracking
- Cosmetic customization options (court themes, paddle designs)
- Backend integration for secure purchase verification

User Target:
5,000+ Monthly Active Users (MAU)

WatchOS Port:

- Swift rewrite leveraging Core Motion framework
- Apple Watch Series 6+ optimization
- TestFlight beta program
- App Store submission
- Cross-platform feature parity

Additional GAMMA Core Games:

- Road Rash (gyro-controlled racing) - April 2026
- Pinball (physics arcade with haptic feedback) - April 2026
- Additional retro game adaptations using shared engine

RETROTENNIS: MARKETING & GO-TO-MARKET

Target Market

Primary Audience Demographics

- Smartwatch owners (Wear OS ecosystem)
- Age range: 25-45 years (tech-savvy professionals)
- Income level: Affluent (41% earning $100K+ annually)
- Interests: Retro gaming, casual gaming, mobile gaming, wearable tech
- Behavioral: Commuters, fitness enthusiasts, multitaskers

Market Opportunity

Wear OS Market Share: 27% (2024) - up from 21% in 2023 (37% growth)
Smartwatch Gaming Gap: Most games are mobile ports or $1M+ exclusives
Unique Position: Platform-native games at lean development costs don't exist
User Spending: Premium device owners ($80-$500 watches) show strong IAP conversion

Launch Strategy

Community-First Approach

- Reddit organic growth - r/WearOS, r/AndroidGaming, r/IndieGaming
- Beta tester engagement - leverage 34-person community as evangelists
- Product Hunt launch with live demo and founder Q&A
- Discord community for player feedback and feature requests
- GitHub presence showcasing technical innovation

Content Marketing

- Development blog series on Medium - technical challenges, sensor programming
- YouTube demo videos showing unique wrist-control mechanics
- Twitter/X thread documenting indie game development journey
- Technical write-ups on GAMMA Core architecture for developer community
- Press kit with screenshots, GIFs, and founder interviews

[ytd - IMAGE PLACEHOLDER: Marketing funnel diagram from awareness to retention]

Press & Media Outreach

Target Publications: Android Central, 9to5Google, XDA Developers, The Verge (wearables section), Ars Technica, TouchArcade

Pitch Angle: First truly platform-native Wear OS game; indie innovation on constrained hardware; privacy-first gaming in analytics-heavy market

Growth Metrics & KPIs

Metric	Target (Month 1)
Total Installs	1,000+
Day 1 Retention	>40%
Day 7 Retention	>25%
Free-to-Premium Conversion	3-5%
Session Length	5+ minutes average
Crash Rate	<1%

ROKO GAMES: TEAM

Founders

G.S.K.S Kiran — Founder & CEO

Background:

- 2.5+ years Android/Wear OS development
- 2 shipped commercial apps
- Open-source contributor
- Lead developer and architect

Role at Roko Games:

- Product vision and technical architecture
- Sensor engine development
- Game prototyping and iteration

G. Gayathri — Co-Founder & Operations Lead

Background:

- 3 years corporate experience
- Human resources management and leadership roles

- Decorated Rotaract club member

Role at Roko Games:

- Community management (beta testers, social media)
- Operations and resource allocation
- Partnership outreach and business development

Team Structure (Current)

Role	Count
Founders (Full-time)	2
Contract Developers (Part-time)	1
QA Testers (Community)	34

Table: Current team composition

Future Hiring (Post-Funding)

- Game Designer: Q2 2026 (after RetroTennis launch validation)
- 2D Artist: Q3 2026 (for expanded art needs across 3+ games)
- Freelance iOS Developer: Q3 2026 (WatchOS port)

FUNDING & INVESTMENT ASK

Current Funding Request: ₹5 Lakhs

Use of Funds Breakdown

Category	Amount (₹)	Percentage
Development (Salaries, Tools)	3,00,000	60%
Marketing & User Acquisition	1,20,000	24%
Legal & IP Protection	40,000	8%
Contingency	40,000	8%
Total	5,00,000	100%

Table: Investment allocation plan

Milestones Unlocked by Funding

Tranche 1 (₹2L): User Acquisition & Data

- Objective: 10,000 MAU & retention validation
- Timeline: Feb-March 2026

Tranche 2 (₹3L): Scale & Cross-Sell

- Objective: Launch Game #2 (Road Rash) to existing user base
- Timeline: April-June 2026
- Zero CAC launch via existing RetroTennis player base

PARTNERSHIP: IMAGE COE (STPI)

Why This Partnership Matters

Azure Credits (₹10L+ Value)

- Scalable backend for multiplayer features
- Analytics and data processing
- AI/ML model training for gesture recognition

STPI Network Support

- Health/wellness certification pathway for Companion app
- B2B partnership introductions (corporate wellness)

Media Partnerships

- Amplifies RetroTennis launch PR
- Access to gaming influencer network

Legal & IPR Support

- Protects Roko Sensor Engine IP
- Patent filing assistance for unique haptic mechanics

Founder-Friendly Terms

- No milestone-contingent funding
- Patient capital with MFN conversion rights
- Equity structure respects founder control

MARKET POSITIONING & COMPETITIVE ANALYSIS

The Wearable Gaming Landscape

Current Competitors

Type	Examples	Weakness
Mobile Ports	2048, Sudoku	Poor UX, not sensor-native
Premium Exclusives	Runeblade	$1M+ budget, slow updates
Fitness Gamification	Pokémon GO Watch	Not true games

Table: Competitive landscape analysis

Roko Games Differentiation

We occupy the gap: Platform-native games at lean indie costs.

- vs Mobile Ports: Built for sensors, not touch
- vs Premium Games: 10x faster iteration, 5x lower cost
- vs Fitness Apps: True entertainment value, not just step tracking

Total Addressable Market (TAM)

Serviceable Addressable Market (SAM): 150M Wear OS devices globally (2026 estimate)

Serviceable Obtainable Market (SOM): 500K-1M gamers actively seeking watch games (Year 1 target: 0.5-1% penetration)

Revenue Potential:

- 10,000 MAU × ₹15 ARPU × 12 months = ₹18L annual revenue (conservative)
- At 50,000 MAU (realistic by end of 2026): ₹90L annual revenue

VISION & EXIT STRATEGY

Long-Term Vision: The Wearable Gaming Platform

You're not just funding RetroTennis. You're funding the infrastructure that lets a lean team compete in an entirely new form factor.

Phase 1 (2026): Prove the Model

- Ship 3-4 games using Roko Sensor Engine
- Build 50K+ active user community
- Validate wellness + gaming hybrid category

Phase 2 (2027): Platform Play

- License Roko Sensor Engine to other indie developers
- Unity/Unreal plugin for smartwatch game development
- Revenue sharing model (20% of gross from games built with our engine)

Phase 3 (2028+): Ecosystem Leader

- Smartwatch game publisher (fund other devs, take equity + rev share)
- B2B wellness licensing (enterprise ADHD/stress management tools)
- Acquisition target for major players

Potential Exit Paths

1. Acquisition by Gaming Publisher: Zynga, Voodoo, or similar casual game studio expanding to wearables

2. Acquisition by Smartwatch OEM: Samsung, Google, Apple acquiring gaming IP for platform differentiation

3. Acquisition by Fitness/Health Company: Fitbit, Garmin, Whoop acquiring gaming + wellness hybrid

4. B2B Wellness Licensing: Corporate partnerships (Google Workspace, Microsoft Teams wellness integrations)

5. Continued Indie Path: Sustainable revenue, profitable without exit

RISK ANALYSIS & MITIGATION

Key Risks

Technical Risks

Risk: Battery drain makes games unplayable

Mitigation: Adaptive sensor polling, extensive optimization testing, benchmark <2% per 10 min

Risk: Gyro controls too difficult for casual users

Mitigation: Calibration tutorial, difficulty tiers, accessibility options

Market Risks

Risk: Smartwatch gaming market doesn't grow as projected

Mitigation: Dual revenue streams (B2C gaming + B2B wellness), early mover advantage

Risk: Major studio (e.g., King, Supercell) enters space with huge budget

Mitigation: Speed advantage (ship 4 games before they ship 1), IP protection, community lock-in

Business Risks

Risk: User acquisition costs too high

Mitigation: Organic community growth via Reddit/Product Hunt, viral mechanics, zero-CAC cross-selling between games

Risk: Monetization underperforms

Mitigation: Multiple revenue streams (ads, premium, IAP, B2B licensing)

TECHNICAL APPENDIX

GAMMA Core Engine Overview

Proprietary lightweight framework built specifically for Wear OS constraints. Modular architecture enables rapid development of multiple games on shared foundation.

Key Components:

- Sensor Transform Layer: Quaternion-based motion processing
- Calibration Manager: Auto-adaptive to individual hand movements
- Physics Engine: 30fps centralized collision and motion system
- Rendering Pipeline: AMOLED-optimized with efficient caching
- State Management: Reactive patterns with Kotlin Coroutines

Platform Specifications

Target Platform: Wear OS 3.0+
SDK Target: Android 15 (API 36)
Language: Kotlin with Jetpack Compose
Performance: 30fps stable, <100ms latency, <2% battery per 10min
Privacy: Zero data collection, fully offline-capable

RetroTennis Game Modes Summary

Arcade: Horizontal wrist rotation, vertical net, adaptive AI

Power: Vertical wrist movement, horizontal net

Retro: 360° circular view, combined motion control

Retro Pro: Enhanced Retro with trajectory control mechanic

Co-Op: Two-player via mobile companion (in development)

CONTACT INFORMATION

For partnership inquiries, press requests, or investment discussions:

Company: Roko Games Private Limited
UDYAM: UDYAM-AP-10-0124235
Location: Visakhapatnam, Andhra Pradesh, India

Email: kiran@roko.co.in

Website: roko.co.in
Play Store: Roko Studios

GLOSSARY

AMOLED: Active Matrix Organic Light-Emitting Diode - display technology where black pixels save battery

GAMMA Core: Proprietary modular game engine for Wear OS sensor-based games

ARPU: Average Revenue Per User

CAC: Customer Acquisition Cost

MAU: Monthly Active Users

Wear OS: Google's smartwatch operating system

Quaternion: Mathematical representation of 3D rotation for accurate sensor tracking

SAM: Serviceable Addressable Market

SOM: Serviceable Obtainable Market

TAM: Total Addressable Market
